Company profile

A lot of experience

The plant construction company GBT from Villingen provides much more knowledge in the field of preparation, system and cooling systems than it can be assumed due to the relatively short market presence.

The German Battery Technology (GBT) was founded in July 1980 in Villingen. The plant was chosen for a reason: because the current managing partner, Wolfgang Pöhl, has his roots in the company. Pöhl has already worked in the mechanical production of a professional product range, which is technology for all ranges of plants. Together with his partner, Peter Pöhl, who has obtained from his own experience in the field of technology, he has developed a company with a focus on the production of battery systems, especially with a focus on the production of battery systems for the automotive industry. After the acquisition of the company, the existing portfolio was further expanded by the integration of the company's technical know-how in the field of battery technology. The company's managing director, Peter Pöhl, is a leading expert in the field of battery technology, having worked in the field of battery technology for over 30 years. He is currently managing the company's technical department, which is responsible for the production of battery systems. The company's managing director, Peter Pöhl, is a leading expert in the field of battery technology, having worked in the field of battery technology for over 30 years. He is currently managing the company's technical department, which is responsible for the production of battery systems.

Over 20 years of experience in the field of battery technology, the company has a proven track record in the production of battery systems. The company's managing director, Peter Pöhl, is a leading expert in the field of battery technology, having worked in the field of battery technology for over 30 years. He is currently managing the company's technical department, which is responsible for the production of battery systems.
